**Wyattville Road-Traffic Calming**

**Question : Councillor E. Costello**

"To ask the Manager to explain what the Roads Department are currently doing to the Wyattville Road. Firstly they installed two roundabouts, then removed them and then re-installed them, then they installed 5 speed humps and two months later removed them?"

**Reply :**

The original two roundabouts were installed as designed by the Consultants, but during monitoring were found to be performing less effectively than envisaged. A revised design was then prepared and constructed.

During the installation of the ramps some minor remedial works were carried out on the ramps to achieve more appropriate gradients. The ramps were installed in a two stage construction to finish with the "imprint" brick surfacing. There are some outstanding traffic calming measures to be completed on the road.
